Royal Huisman Streamlines Yacht Design/Engineering

About Royal Huisman: A Passion for Perfection

There are few names in yacht design and construction that can match the prestige of **Royal Huisman**. Over the course of the company's 134 year history it has evolved from a modest builder of wooden workboats to regularly winning awards for creating the finest superyachts in the world. Royal Huisman is an extraordinary blend of 21st century technology and innovation, traditional craftsmanship and timeless values. The combining factor between employees, the yard, as well as its customers is that they all have a passion for perfection.

Embracing Innovation to Create the Exceptional

To meet Royal Huisman's very demanding standards for quality, the company has embraced the latest enterprise-wide software solution. The company is now adopting SSI's industry-leading **EnterprisePlatform** product for leveraging engineering information throughout the company's extended environment. This technology will help Royal Huisman deliver on its constant commitment to its customers regarding "Creating the Exceptional".

Testimonial about EnterprisePlatform

Lambertus Oosterveen, CAD Manager at Royal Huisman, says about the yard's requirement to share data and cut time:

"We were looking for a tool to share product data model information, and cut time spent on repetitive tasks. EnterprisePlatform PublisherLT does exactly that."

Don't Think Twice

"Our users benefit greatly from its functionality. It saves them time when they are gathering information in ShipConstructor and AutoCAD; they do not have to think twice about errors they could be making when repeating a task, and the platform is easy to run."

Proverbial 'No Brainer'

"EnterprisePlatform processes are quick, scalable, configurable, consistent, and transparent in use - all important considerations to us when we were looking into the purchase of EnterprisePlatform. But because it is so efficient, and provides the exact information needed to other departments, software applications, production equipment, people, programs and processes, it was the proverbial 'no brainer', really."

Very Pleased

"The platform allows our users to load information, drawings, assemblies, parts, spools and more by specified criteria. That saves time (important to Royal Huisman) and annoyance (important to our users) because users do not have to navigate the ShipConstructor product model to find each and every item. In short, we are very pleased with SSI EnterprisePlatform!"
