

PublisherLT

PublisherLT is the first in the EnterprisePlatform line of products from SSI. PublisherLT allows you to gather, convert and manipulate information in a product data model, commonly the ShipConstructor MIM, and save it to another location. It does this in a centralized fashion (from one user interface) that is outside of the CAD/CAM toolset.

PublisherLT BENEFITS

1. Finds information in a product data model such as the ShipConstructor MIM.
2. Automates repetitive tasks.
3. Keeps skilled users focused on high value work.
4. Does not require knowledge of ShipConstructor.
5. There is no doubt PublisherLT will add value the day it is implemented (ask your local SSI rep about our "Money where our mouth is" policy) but additionally an investment in PublisherLT provides foundational licensing for expansion and integration with the growing line of SSI EnterprisePlatform products.
