

Customer List

Diverse and Growing

SSI's ShipConstructor software is in use at an extraordinarily wide range of organizations which shows the scalability of the ShipConstructor solution. SSI customers range from small design shops to large enterprise clients working on both commercial and naval projects. Shipbuilders, naval architects and marine engineers trust SSI on a very diverse range of projects such as yachts, oil rigs, tankers, ferries, warships or workboats. SSI software is also flexible enough to handle complicated niche detail design and production engineering challenges involving the 3D modeling of complex metal structures.
