

Modular Licensing Details

The ShipConstructor software suite consists of several task-based products. These products can be licensed in a modular fashion enabling clients to assemble a ShipConstructor package that best fits their needs. Each product is available in 3 editions (Standard, Premium and Ultimate) corresponding to an increasing number of parts or objects required for projects of different sizes.

Base Products	Associated Products	General Products
Structure	Nest WeldManagement+ MarineDrafting Hull* NC-Pyros*	ProductHierarchy and Report
Pipe		
HVAC	(None)	
Electrical	(None)	
Equipment	(None)	
Penetrations	(None)	

*If Hull or NC-Pyros are purchased independently they must be purchased in an Ultimate Edition
 +A license of the base product will be occupied when a user utilizes the license of the associated product

Base Products

- Generally correspond to Engineering disciplines
- Sold per edition (Standard, Premium, Ultimate) (See Chart Below)
- Different base products can be sold at different edition levels

Associated Products

- Extend capability of base product Engineering discipline
- Price is derived from the editions of the base products with which they are associated. For example, MarineDrafting is a product associated with Structure so MarineDrafting must be purchased at the same edition level as Structure.

General Products

- Manage database, model hierarchy, and build strategy; provide reports and import /export functions
 - Strongly recommended for almost all scenarios
 - Price is derived from the highest edition of base product purchased.
- For example, ProductHierarchy has to be purchased at the same edition level as the highest edition level Structure, Pipe, HVAC, Equipment, Electrical or Penetrations.

Editions

- Govern the number of ShipConstructor objects/parts that can be created per product
- Note: AutoCAD functionality is not constrained by ShipConstructor edition levels

ShipConstructor Parts/Objects per edition			
Base Product	Standard Edition	Premium Edition	Ultimate Edition
Structure	2250	5250	Unlimited
Pipe	1200	2800	Unlimited
HVAC	1200	2800	Unlimited
Electrical	300	700	Unlimited
Equipment	450	1050	Unlimited
Penetrations	450	1050	Unlimited

As an example, the approximate requirements for Structure are:

- Under 20 m vessel: **Standard Edition**
- Under 30 m vessel: **Premium Edition**
- Over 30 m vessel: **Ultimate Edition**

However, note that these editions allow clients to collaborate with companies doing larger projects using WorkShare where their share of the work is smaller than the minimum parts for each edition.
